Huaykaew Place, Chiang Mai, Thailand

SUMMARY

Full-stack developer with over 5 years of experience delivering scalable web applications using Angular, React, and Node.js. Skilled in integrating cloud services and secure payment systems, with proven success managing projects serving thousands of users daily. Adept at leading teams and optimizing CI/CD pipelines to ensure high-quality, rapid deployment and enhanced user experience.

EXPERIENCE

Frontend Developer (Freelance)

2026-June - 2026-Aug

Iron Software

Remote

- Migrated legacy PHP-based websites to Astro while maintaining pixel-perfect designs and visual consistency.
- Converted legacy CSS and hardcoded content to Tailwind CSS and JSON-based localization, improving maintainability and consistency across pages.
- Performed detailed UI QA and cross-page consistency checks, fixing feedback and visual issues across a large set of localized product pages.

Full Stack Developer (Freelance)

2024-Feb - 2026-May

Win Intelligence Software Ltd

Remote

- Developed and maintained full-stack web applications using Angular, React, Next.js, Vue.js and Svelte for front-end development, using Nx Monorepo to manage scalable and modular project architecture.
- Implemented backend services with Node.js and Express.js, leveraging AWS for cloud infrastructure and services.
- Integrated secure payment solutions, including Adyen and Saferpay, to enhance user experience and streamline transactions.
- Designed and managed CI/CD pipelines using AWS CloudFormation, CodeCommit, and CircleCI to automate builds, testing, and deployments.
- Collaborated with cross-functional teams to design, develop, and deploy scalable web applications.
- Ensured code quality through code reviews, and made sure to follow best practices.

Full Stack Developer

2023 - 2024

TASTYSOFT Software Outsourcing Co., Ltd (partnership with Myanmar Information Technology Co., Ltd)

On-site

- Conducted weekly meetings with the Product Owner for project requirements and features.
- Ran daily standups with a team of 4 for daily assignments.
- Tracked the team's progress, identifying bottlenecks early and taking necessary action.
- Maintained high standards of quality in code and process, conducting weekly code reviews.
- Designed and implemented user interfaces using Angular, ensuring a seamless and intuitive user experience.
- Developed server-side logic and APIs using Python, integrating with databases and other backend services.
- Managed production-level projects with 3K+ daily active users.

TASTYSOFT Software Outsourcing Co., Ltd (partnership with Myanmar Information Technology Co., Ltd)

📍 On-site

- Developed a Learning Platform and Human Resource Management System using Angular.
- Deployed and monitored applications using AWS and Digital Ocean.
- Collaborated with the team lead on UI/UX design.
- Conducted testing and debugging of web applications.
- Collaborated with back-end developers to design the database system.

PROJECTS

Triggr

🔗 github.com/HtetWaiYann/workflow-builder

A visual, node-based workflow builder that lets users design, configure, and run automation workflows through a drag-and-drop canvas — no code required.

- Drag-and-drop canvas with trigger, HTTP request, transformer, condition, delay, and output nodes.
- Real-time per-node execution status, execution history, and template interpolation across upstream outputs.
- REST API and scheduled (cron) triggers backed by BullMQ + Redis, with AES-256-GCM encrypted workspace variables.
- Built with React 19, React Flow, Zustand, and Tailwind on the frontend; Node.js, Express, Prisma, and PostgreSQL on the backend.

Angular Internal Labs

🔗 angular-internal-labs.htetwaiyan.com

Interactive platform that visualizes Angular internals such as change detection, signals, RxJS streams, routing lifecycle, and dependency injection in real time.

- Hands-on labs for change detection, signals, RxJS, router lifecycle, dependency injection, and trackBy.
- Router lab walks through guards, resolvers, and lazy-loaded children with a live timeline view.
- Built on Angular 21 with standalone components, lazy-loaded routes, and Vitest for unit tests.

Relax

🔗 relax.htetwaiyan.com

Relax is a torrent streaming for movies and series. It is a personal project, built for my own use — not a product, not something I expect anyone else to run. It exists mostly as an excuse to design a real cross-runtime desktop app end to end.

- Desktop streaming app for movie geeks
- The architecture is what I care about here — the contract-first boundary, the locked-down Electron layer, the interface-driven backend

ATS-Ready Resume

🔗 resume.htetwaiyan.com

Browser-based resume editor with drag-and-drop section reordering, live preview, and true vector PDF export with working clickable links.

CERTIFICATIONS

AWS Certified Cloud Practitioner

Amazon Web Services (AWS)

AI Programming with Python Nanodegree

Udacity

LANGUAGES

Burmese

Native

English

Advanced

SKILLS

Front-end frameworks

Angular, Svelte, React, Next.js, Vue.js

Back-end technologies

Node.js, Express.js

Web development languages

HTML, CSS, JavaScript, TypeScript

Databases

MySQL, PostgreSQL, MongoDB, DynamoDB

Cloud services

AWS, Digital Ocean

EDUCATION

Bachelor of Science (Hons) in Computing

12/2024 - 12/2025

University of Greenwich

Remote

Associate Degree of Science

11/2021 - 12/2023

University of the People

Remote

Major in Computer Science and Engineering

12/2017 - 02/2021

Myanmar Institute of Information Technology

Myanmar

Completed 5 semesters majoring in Computer Science and Engineering.
